

## How often is ShedTech updated?

Last revised Monday, 23 January 2012

---

Normally ShedTech will have a major version release every 12 months containing new buildings and functionality. During this time there will normally be several smaller maintenance updates to resolve issues with new building types and to expressly issue any engineering changes.

When releasing an update, we try to make sure that your current version is unaffected until you upgrade. In some cases, this will not always be possible, and when this happens, we leave this piece of development until the very end.

During each update, we also try to include as many wish-list and low priority items as is possible in the time-frame. Our key priorities though, are those that will help you sell more sheds by increasing range, and decreasing price. We also tend to put a higher priority on wish-list requests that are received from multiple users. If you would like to suggest an improvement to ShedTech, please [contact us](#) and tell us how.
